*Water dilution shall be performed with potable water 1:1 by volume adding water to the concentrate		

The rejuvenating agent shall have a record of satisfactory service as an emulsified asphalt rejuvenating agent and in-depth sealer. Satisfactory service shall be based on the capability of the material to decrease the viscosity of the asphalt binder as follows. The viscosity shall be reduced by a minimum of 25% for pavements less than or equal to 3 years old and 40% for pavements greater or equal to 4 years old. The rejuvenating agent shall not harm pavement striping so restriping is not required.

The bidder must submit with his bid the manufacturer's certification that the material proposed for use is in compliance with the concentrated rejuvenating agent requirements and the diluted emulsion requirements.

The bid submittal must include documentation of previous use and test data conclusively demonstrating that the rejuvenation product has been used successfully; and that the construction joint rejuvenation product has been proven to perform in a manner equivalent to above performance specification, through third party testing and/or agency use showing the required change in the recovered asphalt binder properties.
